

project profile

Ski Bromont – Bromont, QC

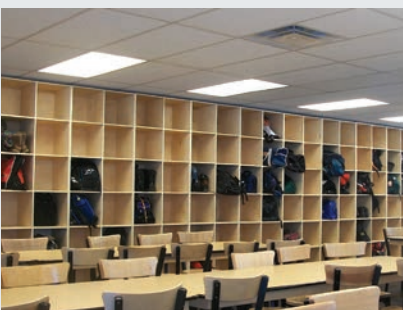

Project Information

- **Building Use:** Ski Resort Cafeteria & Rest Area
- **Total Square Footage:** 10,080
- **Days to Complete:** 120

Situation

The largest lighted ski center in North America, an innovative marketing strategy and 7 spectacular hillsides, including 145 trails and runs, Ski Bromont became a victim of its own success. The resort's popularity, located 45 minutes from Montréal, required a new chalet at the base of "du Lac and des Épinettes" runs, to meet their customers requirements.

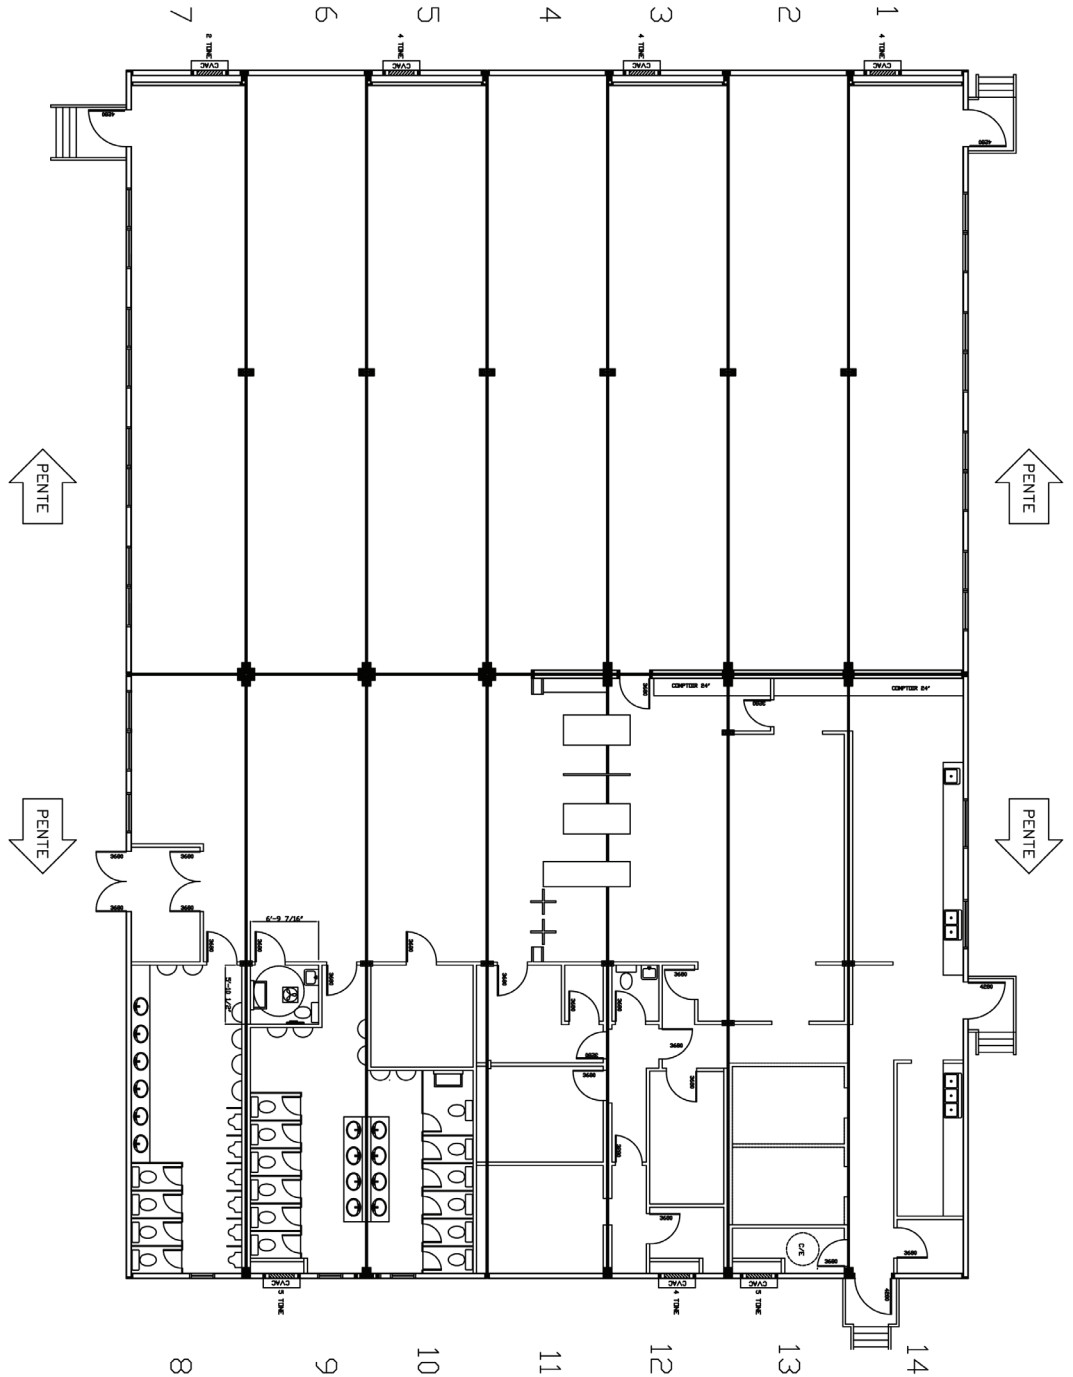

Solution

Ski Bromont quickly understood that the use of modular buildings was an attractive and functional method of construction that effectively meets their customers' needs at a lower price than a conventional structure, while allowing flexibility for possible expansion.

ModSpace came through on time and on budget and met all of Ski Bromont's requirements and those of their customers. The facility, deemed "L'Entracte", is composed of 14 modules, with cafeteria seating for 550 and offers skiers and snowboarders a full catering service, washroom area, ticketing booths and an abundance of lockers.

Inside Ski Bromont's comprehensive solution customers and staff enjoy a large commercial-grade kitchen with walk in coolers and freezers, to simple clothing hooks, ski boot storage and non skid landings secured to helical pier foundations.
